DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submissions filed on June 26, 2003 and August 11, 2003 have been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1, 8 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by JP01/170674.

JP01/170674 teach a recording liquid comprising emulsified oily drops in an aqueous medium, which is prepared by adding diethylphthalate (i.e. high boiling point organic solvent) and an oil soluble dye such as C.I. Solvent Red 49 to water and then emulsifying to form the recording liquid. See the abstract from Patent Abstracts of Japan (copy supplied by Applicants) and the abstract from Derwent (copy supplied by

the Examiner). The recording liquid as taught by JP01/170674 appears to anticipate the present claims.

Allowable Subject Matter

4. Claims 2-7, 9-15 and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: JP01/170674 fails to teach or fairly suggest an ink jet ink composition containing: (1) dye dispersed particles having a volume average particle size of 1-100 nm; (2) an oil soluble dye of the formulas (I)-(III) or (3) a high boiling point organic solvent of the formulas (S-1) to (S-9) as claimed by applicants.

Conclusion

The remaining references listed on forms 892 and 1449 have been reviewed by the examiner and are considered to be cumulative to or less material than the prior art references relied upon in the above rejections.
